

EDUCATIONAL & DEVELOPMENTAL BENEFITS

There are many educational, developmental and social benefits to the Bricks 4 Kidz® approach to learning through play. Here are just a few:

- ⚙️ Fine-motor skills are developed as children sort and assemble small bricks, axles, gears and bushings.
- ⚙️ Organizational skills are developed by using our labeled project kits. This skill transfers into every area of life; at school, home, or in the workplace. Children are most efficient when they can quickly and easily access the materials they need to complete a task.
- ⚙️ Students retain more when lessons are delivered in the context of something that interests them such as playing with LEGO® Bricks!
- ⚙️ Hands-on classes engage visual, auditory and kinesthetic learning styles.
- ⚙️ Students gain practice following step-by-step directions to complete a task. This is especially valuable for children with attention-deficit challenges.
- ⚙️ Completing a model nurtures process-oriented thinking and abstract thought, challenging students to envision the project before it is complete.
- ⚙️ Social-emotional skills such as patience, communication and cooperation are exercised in the process of completing build.
- ⚙️ Working to complete a project develops goal-oriented persistence.
